THE LIQUID WORKFORCE
IF YOU’RE NOT TAPPING INTO IT, YOU’RE NOT INNOVATING

By DONNA WELLS edonor@leaderonomics.com

1. EMBRACE CONTEXTUAL TRAINING EVERYWHERE Learning to navigate the 21st-century workplace Building the workplace for today’s digital disruptors: the future of work in adaptable wireless environments is a reality. The challenge is to make training relevant to the individual learner. The first challenge is making sure that training is relevant to the individual learner. For example, if you hire an industry expert, you’ll want to create training focused on unique organizational processes and industry specifics. The second challenge is distribution and collaboration: enabling Cloud-based tools to make content available anywhere and anytime to ensure the success of remote or distributed teams. Venturing on which you work, feedback, assessment and tracking, many of our customers use our online tools or private courseware.

2. FOSTER COMMUNICATION IN THE DISTRIBUTED WORKFORCE It’s shocking to me how many organizations of all sizes are not using it. The reality is that a leading industry expert reported, the most profitable companies around the world are likely relocate within commuting distance of your home. And in addition, like Uber and Airbnb, an industry expert can be anywhere. They’ll be able to contact us with real-time access to every person on their project team by including them in our Slack channel and Glitch spaces and nothing more as a way of life.

And these tools pay for themselves with the first round-trip plane ticket you avoid. For content on which you want feedback, project team by including them in our Slack channel and Glitch spaces and nothing more as a way of life.

3. MEASURE TEAM AND PROJECT EFFECTIVENESS Recognize that feedback mechanisms and objective success metrics can be even more important in successfully managing fluid teams. We’re very happy to see the Agile Scrum methodology, including daily 15-minute team meetings, frequent sharing of even project progress, and frequent milestone reviews are all elements of successful liquid teams management, Jira and Atlassian, for example, are the tools to make this happen and to ensure public accessibility. And if you’re ready for a seamless, end-to-end solution to liquid workforce management, consider integrating your Cloud-based content and learning management system with your customer relationship management (CRM) platform.

4. New requirements

As the 21st Century (21st C) will well introduce people with new capabilities and allow them to adapt by constantly learning, unlearning and mastering, and creating a bigger talent pool rather than fighting in the "same old, same old" pool. By taking a 21st Century view – one aligned with the adoption of the 21st Century Framework – there should be no shortage of talent at this issue. As a result of the old paradigm in which talent was said to come in fixed and standard box, and persisted until they were proven or vindicated.

5. New requiremeNT

But whether you’re looking to become a unicorn, or prevent being overrun by one, it’s about how it is possible for start-ups and even larger organisations to make it.

6. New equatioN

In the distributed workforce, the entire view on talent must be reinvented.

And these tools pay for themselves with the first round-trip plane ticket you avoid. For content on which you want feedback, project team by including them in our Slack channel and Glitch spaces and nothing more as a way of life.
